

### Adapt Waikiki 2050

## Mayor Rick Blangiardi

Charrette #2

August 14, 2024 | 8:30 AM – 11:30 AM St. Andrews

# Adapt Waikīkī 2050 Charrette 2

August 14, 2024

## **Project Team**

Workshop Green, LLC

Client

Lead Consultant

**Noelle Cole** Dina Wong Imelda Fernandez Min Bu

**Kitty Courtney** Carol Hufnagel **Melissa May** Ollie Lau Erin Emerson

Wendy Meguro

Project Manager Team member

## **Meeting Objectives**

- Introduce the project and consultant team
- Present Climate Change impacts facing public infrastructure and private development in Waikīkī through four scenarios
- Identify and discuss the feasibility and relevance of potential adaptation solutions to mitigate flood risk.

# Where does Climate Change fit in the City's Land Use Planning?

## O'ahu's Eight Planning Regions

### AW2050 is a Special Area Plan for the Primary Urban Center...

![](_page_7_Picture_0.jpeg)

### ...and a pilot project of the One Water Honolulu Panel, (ROH 2-10.13(b)

## Integration Among City Plans

![](_page_8_Figure_2.jpeg)

![](_page_8_Picture_3.jpeg)

![](_page_9_Picture_0.jpeg)

# AW2050 Project Overview

![](_page_10_Picture_0.jpeg)

## **Project Objectives**

- Identify near-term (2050) adaptation measures for the Waikīkī Special District
  - Voluntary
  - Regulatory
- Identify potential City adaptation projects for near-term infrastructure resilience
- Provide a long-term (2100) outlook for the Waikīkī Special District
- Identify needed studies and institutional capacity assessments related to:
  - Long-term land use planning
  - Infrastructure and design guidelines and regulations
  - Shoreline development

![](_page_10_Picture_11.jpeg)

![](_page_10_Picture_12.jpeg)

![](_page_11_Picture_0.jpeg)

## AW2050 Special Area Plan – Theory of Change

**IF** recommendations have been evaluated, planned for, and implemented within the next 25 years, **THEN** the following results are expected in the WSD:

- Adaptation solutions extend the useful life of existing roads and subsurface infrastructure in a cost-effective manner;
- Stormwater management reduces flood impacts through grey/green infrastructure and;
- Land use and redevelopment plans, based on climate risks and City-wide infrastructure service determinations, enable viable adaptation pathways through the end of the century.
- Emergency response to extreme rainfall-driven flood and heat events protects public safety;

![](_page_11_Picture_7.jpeg)

![](_page_12_Picture_0.jpeg)

### Charrette 1

## Focused on public infrastructure

![](_page_12_Picture_3.jpeg)

Engage with public agencies to:

- Identify current climate related impacts to surface and subsurface infrastructure
- Brainstorm/share information on near-term public resilience measures
- Explore projected impacts to infrastructure beyond 2050

![](_page_12_Picture_8.jpeg)

Ala Wai Canal over-topping during a King Tide Image Source: UH SOEST King Tides Project

![](_page_13_Picture_0.jpeg)

### Charrette 2

Focus on the interface between public infrastructure and private development

![](_page_13_Picture_3.jpeg)

High-wave sand movement along a Waikīkī Beach walkway Image Source: HHF for DPP

- Engage with the Waikīkī business community to:
- Identify current climate related impacts to property and operations and any current private sector adaptation(s)
- Brainstorm near-term (2050) public and private solutions and best practices
- Explore projected impacts and adaptation needs beyond 2050

![](_page_13_Picture_9.jpeg)

![](_page_14_Picture_0.jpeg)

## Scope, Schedules and Tasks

![](_page_14_Figure_2.jpeg)

![](_page_14_Picture_3.jpeg)

![](_page_15_Picture_0.jpeg)

# Polling

![](_page_16_Picture_0.jpeg)

## Mentimeter

- We will be conducting polling during todays meeting using Mentimeter.
- To participate please either
  - Open a new browser window and enter: menti.com and add the code 7224 7237
  - $\odot\,\textsc{Or}$  scan the QR code below that will take you to the polling questions

![](_page_16_Picture_6.jpeg)

## **Scenario Overview**

![](_page_23_Picture_1.jpeg)

### 1 – Heat Extremes

**Strategy Objective:** Mitigate <u>temporary</u> and <u>widespread</u> extreme heat events

### 2 – Rainfall-Driven Compound Flooding (1 ft SLR, ~2040)

**Strategy Objective:** Mitigate <u>temporary</u> and <u>widespread</u> flooding from extreme rainfall events compounded by high tides and storm surge

3 – SLR-Driven Shallow Groundwater Exposure (1 ft SLR, ~2040)

**Strategy Objective:** Extend the useful life of subsurface infrastructure exposed to <u>permanent</u> and <u>widespread</u> shallow (<5 ft below land surface) groundwater

## 4 – SLR-Driven Groundwater Inundation (4 ft SLR, ~2080)

**Strategy Objective:** Address <u>permanent</u> and <u>localized</u> flooding from groundwater above land surface

5 – SLR-Driven Groundwater Inundation (6 ft SLR, ~2100) Strategy Objective: Address permanent and widespread flooding from groundwater above land surface

![](_page_23_Picture_11.jpeg)

### **1** HEAT EXTREMES

![](_page_24_Picture_1.jpeg)

### IMPACTS

- <u>Widespread</u>, <u>temporary</u> extreme heat
- Respiratory illnesses, heatstroke, and cardiovascular and kidney disease
- Overwhelms to emergency services, health services, need for cooling centers
- Increasing energy costs with increased demand for air conditioning
- Damage to above ground infrastructure from heat
- Trees and vegetation stressed by heat extremes and drought-related water limitations

![](_page_24_Figure_9.jpeg)

![](_page_25_Picture_0.jpeg)

## Poll

![](_page_25_Figure_2.jpeg)

![](_page_25_Picture_3.jpeg)

![](_page_26_Picture_0.jpeg)

## Heat Extremes

## What impacts from heat events have you experienced

- Increased report of heat-related health issues
- Increased energy usage/higher utility bills
- Power failure/brown outs
- Physical damage to infrastructure (i.e. asphalt, metal structures)
- Loss of vegetation/landscaping
- Increased water usage/cost to maintain grounds and cooling towers

### Have you taken any of the following actions?

- Distributed educational material on heat stroke to employees/residents
- Modified outdoor workers schedules
- Added more awnings and trees to increase shading
- Planted more heat tolerant species
- Increased permeable surfaces for evaporative cooling
- Used lighter colored/solar reflective surfaces/coatings (e.g. paving, structures)
- Other
- No action

![](_page_26_Picture_18.jpeg)

Please go to menti.com and enter code 7224 7237

![](_page_26_Picture_20.jpeg)

![](_page_27_Picture_1.jpeg)

### IMPACTS

- <u>Widespread</u>, <u>temporary</u> flooding from ~1 extreme rainfall event annually (>3 in rainfall/24 hrs)
- Road flood depths >1 and >2 ft localized along the Ala Wai Canal
- Disruption of transportation for residents, visitors, & emergency vehicles
- Disruption of electrical systems, storm drains, & wastewater systems

![](_page_27_Figure_7.jpeg)

Flood modeling from UH SOEST Climate Resilience Collaborative (2023)

![](_page_28_Picture_1.jpeg)

![](_page_28_Figure_2.jpeg)

![](_page_28_Picture_3.jpeg)

![](_page_29_Picture_0.jpeg)

## Poll

![](_page_29_Picture_2.jpeg)

![](_page_30_Picture_0.jpeg)

## 2021 and 2024 Kona Low Events

### What flood impacts were experienced?

- Staff could not get to work
- Damaged property
- Flooded roads impeded transportation
- Flooded structures/parking areas at grade
- Flooded structures/parking areas below grade
- Flooded electrical systems
- Power outage
- **Other**

Please go to menti.com and enter code 7224 7237

### What actions were taken?

- Pumped water from flooded below grade structures
- Protected building openings (e.g., sandbags)
- Hired clean up crew/specialized personnel

![](_page_30_Picture_16.jpeg)

![](_page_30_Picture_17.jpeg)

![](_page_30_Picture_18.jpeg)

![](_page_31_Picture_1.jpeg)

### IMPACTS

- <u>Widespread</u>, <u>permanent</u> exposure of below-ground infrastructure
- Damage to below-ground infrastructure
  - Below grade parking/building foundations
  - Road base instability and potholes
  - Corrosion of subsurface utilities
- Difficulty in subsurface construction

![](_page_31_Figure_9.jpeg)

Flood modeling from UH SOEST Climate Resilience Collaborative (2023)

![](_page_31_Picture_11.jpeg)

![](_page_32_Picture_0.jpeg)

## Poll

![](_page_32_Picture_2.jpeg)

![](_page_32_Picture_3.jpeg)

![](_page_32_Picture_4.jpeg)

![](_page_33_Picture_0.jpeg)

# Shallow groundwater (< 5 feet below ground surface)

# What impacts from shallow groundwater have you experienced?

- Damaged subsurface structures/foundation
- Corroding/damaged subsurface infrastructure
- Roadbed damage
- Water accumulated during digging for construction or infrastructure repairs

![](_page_33_Picture_7.jpeg)

![](_page_33_Picture_8.jpeg)

### What actions have been taken?

- Inspected structures for subsurface damages
- Repaired/replaced corroded subsurface infrastructure
- □ Fixed roadbed damage
- Pumped water out of construction/repair sites

![](_page_33_Picture_14.jpeg)

![](_page_33_Picture_15.jpeg)

Please go to menti.com and enter code 7224 7237

![](_page_34_Picture_1.jpeg)

### IMPACTS

- <u>Permanent</u>, <u>localized</u> flooding of the WSD
- Road flood depths >1 and >2 ft localized in West Waikīkī (Hobron) and along the Ala Wai Canal

![](_page_34_Figure_5.jpeg)

![](_page_34_Picture_6.jpeg)

## Poll

![](_page_39_Picture_2.jpeg)

![](_page_39_Picture_3.jpeg)

Groundwater Inundation/Sunny Day High Tide Flooding/High Waves

What impacts have you experienced?

- Flooded structures/parking areas at grade
- □ Storm drain backflow
- Overtopping of Ala Wai Canal
- Structures/walkways impacted by wave energy
- Beach/shoreline erosion
- **Other**

Please go to menti.com and enter code 7224 7237

What actions have been taken?

- Hired clean up crew/specialized personnel
- Protected building openings (e.g., sandbags)
- Protected public walkways or outdoor areas (e.g., sandbags)
- Pumped water from flooded areas
- Other

![](_page_40_Picture_15.jpeg)

![](_page_40_Picture_16.jpeg)

![](_page_41_Picture_1.jpeg)

### IMPACTS

- <u>Widespread</u>, <u>permanent</u> flooding of infrastructure and structures
- Road flood depths greater than 1 and 2 ft throughout WSD

![](_page_41_Figure_5.jpeg)

![](_page_41_Picture_6.jpeg)

| Adaptation Strategies  | Public<br>Investment | Private<br>Investment |
|--|----------------------|-----------------------|
| Conduct infrastructure services phasing study  | Х                    |                       |
| Revise WSD design guidelines/Develop overlay district to promote WSD-wide & localized flood resilience | Х                    | Х                     |
| Elevate roads and associated utilities for a localized area with early flood risk                      | X                    |                       |
| Require Right-of-Way Harmonization Agreements at elevated roads  | Х                    | Х                     |
| Prepare standards for transition zones at elevated roads   | Х                    | X                     |
| Repurpose or fill below-grade spaces/increase building height/density                                  |                      | X                     |
| Elevate buildings on open foundation/fill to new Design<br>Flood Elevation                             |                      | X                     |
| Conduct incremental retreat study: easements, TDR, public lands  | Х                    | 51                    |

![](_page_51_Picture_1.jpeg)

### STRATEGY OBJECTIVE

Address <u>permanent</u> and <u>widespread</u> flooding from groundwater above land surface

![](_page_51_Figure_4.jpeg)

### IMPLEMENT RECOMMENDATIONS FROM SCENARIO 3, BASED ON:

- Feasibility/infrastructure services determinations
- Areas identified for protection, accommodation, or retreat
- Ala Wai Flood Control Project
- Beach Restoration and Maintenance Project
- Shoreline management and jurisdiction
- Availability of insurance
- Other yet known factors

![](_page_51_Picture_13.jpeg)

![](_page_52_Picture_0.jpeg)

# **Break out in Small Groups**

![](_page_53_Picture_0.jpeg)

## SMALL GROUP DISCUSSION

- Polling Question
- Sticker Exercise

 You have a 4-sticker budget which you use however you like. You can put all four on one strategy or one sticker on individual strategies.

- Discussion
  - $\circ$  Has anyone had experience with/or employed this adaptation strategy?

 $\odot$  What are obstacles for implementation?

 How likely do you think property owners are to utilize this strategy by 2050 if the City provides guidance but does not require it?

![](_page_53_Picture_9.jpeg)

Poll

![](_page_54_Picture_1.jpeg)

### **2** RAINFALL-DRIVEN COMPOUND FLOODING (1 FT SLR, ~2040)

### STRATEGY OBJECTIVE

Mitigate <u>temporary</u> and <u>widespread</u> flooding from extreme rainfall events compounded by high tides and storm surge Please go to menti.com and enter code 7224 7237 Or scan the QR code

![](_page_54_Picture_5.jpeg)

| Adaptation Strategies  | Public<br>Investment | Private<br>Investment |
|--|----------------------|-----------------------|
| Prepare stormwater management plan with public and<br>private sector solutions for storage, reuse, & delayed<br>discharge            | Х                    |                       |
| Implement a system for stormwater storage, reuse, & delayed discharge (eg, pumps, cisterns, green/blue roofs, floodable open spaces) | X                    | Х                     |
| Elevate/floodproof facility utility connections & critical equipment   |                      | Х                     |
| Develop emergency response routes & procure high-water<br>emergency vehicles   | Х                    |                       |
| Install tidal backflow preventor   | Х                    |                       |
| Use permeable pavers and trench drains   | Х                    | Х                     |
| Dry floodproof at-grade buildings  |                      | Х                     |
| Install passive flood barriers   |                      | x <sup>55</sup>       |

To what extent is the strategy relevant/appropriate as an adaptation for Waikīkī?

![](_page_55_Picture_0.jpeg)

## SMALL GROUP DISCUSSION

**STRATEGY OBJECTIVE** 

![](_page_58_Picture_7.jpeg)

![](_page_59_Picture_0.jpeg)

## SMALL GROUP DISCUSSION

- Polling Question
- Sticker Exercise

 You have a 4-sticker budget which you use however you like. You can put all four on one strategy or one sticker on individual strategies.

• Discussion

• What are your expectations from the top voted strategy?

O What are your expectations for public and private investment for these strategies?

 $\odot$  What are your expectations from a hybrid scenario?

![](_page_59_Picture_9.jpeg)

![](_page_60_Picture_2.jpeg)

Given the impacts with 6 feet of sea level rise, please rank the factors you are most concerned about (first = most concerned)

- Feasibility of continued infrastructure
- Cost to private landowners to adapt in place
- Loss of useable land area/shoreline erosion
- Loss of recreational beaches
- Increased flooding from the Ala Wai Canal/major storm events
- Property insurance costs and availability
- Other

Given the impacts with 6 feet of sea level rise, how much do you favor each adaptation strategy? Please adjust the slider from 1 (highly favor) to 5 (do not favor)

- Managed Shoreline
- Adapt-in-Place
- Managed Retreat
- Managed Elevation
- Hybrid Approach
